REASONS FOR ALLOWANCE

7. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fail to teach, in combination with the other claimed limitations, quantifying the type of access to the data item and the number of accesses, as recorded separately for each process, which are included in said data item access state, and generating quantified data item access state data of each process in said program; collecting processes that access to a data item satisfying a predetermined condition in said quantified data item access state data; and presenting at least one of a partitioning pattern of the data items and a division pattern of processes, using the quantified data item access state data and the collected processes as substantially recited in independent claims 5, 11, 17 and 19.

The closest cited prior art, Mattson, Jr. (U.S. 6,430,741) teaches a system for analyzing data item access state. However, Mattson, Jr. (U.S. 6,430,741) fails to teach quantifying the type of access to the data item and the number of accesses, as recorded separately for each process,

which are included in said data item access state, and generating quantified data item access state data of each process in said program; collecting processes that access to a data item satisfying a predetermined condition in said quantified data item access state data; and presenting at least one of a partitioning pattern of the data items and a division pattern of processes, using the quantified data item access state data and the collected processes as substantially recited in independent claims 5, 11, 17 and 19; and as pointed out by the applicant's remarks/arguments on pg. 8, par. 1 to pg. 10, par. 1.
